

IPv6 - Internet Protocols version 6

Duration:

one day - workshop

Target group:

Everyone with an interest in networking. Some knowledge of TCP/IP is expected.

Goals:

An introduction to the Internet protocols and preparation for implementing in networks.

Content:

The Internet protocols have existed in its current form for about 20 years and a new version called version 6 has arrived. In this workshop the history, principles and technology behind IPv6 will be presented. The workshop will cover the basic protocols and compare differences and similarities in relation to IPv4. The workshop will include lots of practical exercises and thereby allow us to experiment with practical examples, configure equipment with IPv6 and try out the theory on actual systems.
