

Defensive hacking - protect yourself

Duration:

2 day - workshop

Target group:

Everyone with an interest in networking. Some knowledge of TCP/IP is expected.

Goals:

An introduction to the Internet penetrations testing and preparation for testing your own networks.

Content:

In this workshop the following content and more will be presented vulnerabilities, port scanning, exploits, CVE, wireless security and wardriving, Nessus and other tools for testing

In this workshop we will also go through the techniques and methods for structured testing of networks and systems. The workshop will include lots of practical exercises and thereby allow us to experiment with practical attacks on vulnerable systems with the tools found on the Internet - much like a hacker would do.
